

State Grid TTU dedicated power supply
High isolated, ultra wide input voltage range
AC-DC converter for electric meters

RoHS

FEATURES

- Designed for intelligent distribution and transformer terminals, the main technical indicators meet the national network standards
- Ultra wide input voltage range: 165-480VAC / 230-680VDC
- High I/O isolation test voltage of up to 4000VAC
- EFT, Surge: $\pm 4\text{KV}$ Perf. Criteria B
- Output short circuit, over-current protections
- Any two phase connection is available
- Low output ripple & noise, low standby power consumption
- Satisfies double 380/220 VAC three-phase four-wire over-voltage, duration 1s

LO20-26D1212-05—State Grid TTU dedicated switching power supply. The AC-DC converter is a three-phase four-wire power dedicated switching power supply designed for intelligent distribution terminal, intelligent power distribution detection terminal, etc. According to the latest national grid company enterprise standard and operates over a very wide input voltage range: 165-480VAC or 230-680VDC. It meets the three-phase three wire or four-wire rated voltage. So it is a design solution for electric-meter application sourced from a three-phase AC supply with the requirement of high isolation voltage and rigorous EMC, for extremely harsh EMC environment, we recommend using the application circuit show in Design Reference of this datasheet.

Selection Guide

Part No.	Output Power	Nominal Output Voltage and Current(V_o/I_o)		Efficiency at 230VAC (%) Typ.	Capacitive Load (μF) Max.

Product Characteristic Curve

Note: ① With an AC input between 420-480VAC and a DC input between 600-680VDC, the output power must be derated as per temperature derating curves;
② This product is suitable for applications using natural air cooling; for applications in closed environment please consult factory or one of our FAE.

Design Reference

1. Typical application

Fig. 1: Typical circuit diagram

Part No.	FUSE1/FUSE2/FUSE3	C1/C3	C2	C4	TVS1	TVS2
LO20-26D1212-05	3.15A/250V (Three-phase four-wire input), slow-blow, required 3.15A/500V (Any phase input), slow-blow, required	1μF/50V	100μF/50V	47μF/50V	SMBJ20A	SMBJ20A

Output Filter Components:

We recommend using an electrolytic capacitor with high frequency, and low ESR rating for C2, C4 (refer to manufacture's datasheet). Choose a capacitor voltage rating with at least 20% margin, in other words not exceeding 80%. C1, C3 are ceramic capacitors used for filtering high-frequency noise and TVS is a recommended suppressor diode to protect the application in case of a converter failure.

2. EMC compliance recommended circuit
