TTH0505-1T transformer

FEATURES

- Compact SMD package
- Reinforced insulation
- I/O isolation test voltage 5k VAC/6k VDC
- lacktriangle Operating ambient temperature range: -40 $^\circ$ to +125 $^\circ$
- The patient leakage current: Max 2µA
- Transformer clearance & Transformer creepage≥8mm

TTH0505-1T transformers is compatible with integrated IC used as an 1W DC-DC converter with 5V input, 5V output, meets reinforced insulation requirements. They are especially designed for applications where extremely high isolation, low insulation capacitor with low leakage current in a compact package size is required. They are widely used in applications such as medical, electrical grid, IGBT driver circuits.

- ②Product of input voltage and excitation time;
- ®The temperature of the transformer(ambient plus temperature rise) should be within the operating temperature range;
- (4) The storage temperature of the transformer only;
- ©We suggest that times of reflow soldering should not exceed twice, For actual application, please refer to IPC/JEDEC J-STD-020D.1.

Mechanical Specifications

Notes:

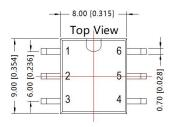

- 1. If it is required to further reduce input and output ripple, the capacitance of C1 and C2 can be increased properly if required, and should be connected close to the pin terminal of the module;
- 2. In order to ensure the converter can work reliably with high efficiency, the minimum load should not less than 1% rated load when it is used. If the needed power is indeed small, please parallel a resistor on the output side (The sum of the efficient power and resistor consumption power is not less than 1%).
